

MUHAMMAD SOHAIL

Full Stack Developer | Backend Systems & AI-Integrated Applications

Lahore, Pakistan | +92 300 2045042 | sohailgazar2045@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years building production SaaS platforms, RESTful and GraphQL APIs, real-time systems, and payment/messaging integrations across the JavaScript and TypeScript ecosystem. Experienced delivering end-to-end features spanning React/Next.js frontends, NestJS/Node.js backends, and SQL/NoSQL databases (PostgreSQL, MySQL, MongoDB, SQL Server). Recent work includes building AI-assisted automation pipelines using Azure OpenAI, FastAPI, and Microsoft Graph API, plus a TypeScript-based trading bot integrating multiple external market APIs over WebSocket. Strong track record of owning features from system design through deployment (Docker, AWS, Railway, Vercel).

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL

Frontend: React, Next.js (14/16), Redux Toolkit, React Query, Vue.js, Tailwind CSS, Framer Motion, React Hook Form, PrimeReact, Chart.js, React Flow

Backend: Node.js, Express.js, NestJS, FastAPI, LoopBack 4, GraphQL, WebSocket, Passport.js, Socket.io

Databases & ORMs: PostgreSQL, MySQL, MongoDB, SQL Server, Redis, Prisma, TypeORM, Sequelize, Mongoose

Cloud & DevOps: AWS (EC2, RDS, S3), Docker, Nginx, PM2, Vercel, Railway, CI/CD, Git/GitHub

Integrations & APIs: Stripe, Twilio, MessageBird, Azure OpenAI, Microsoft Graph API, OpenAI API, Firebase, Cloudinary, Kalshi & Polymarket Trading APIs, Airtable, Google Cloud Functions

Other: Web Scraping (Puppeteer), Authentication (OAuth2.0, JWT), PDF.js, Winston Logging

PROFESSIONAL EXPERIENCE

Full Stack Engineer | Drwaphics

Nov 2025 - Present

- Developed SaaS applications and an automated trading bot using NestJS, Node.js, TypeScript, PostgreSQL, and Google Cloud Functions.
- Built SMS auto-subscription, alerting, and messaging workflows using Twilio and MessageBird, including automated keyword-based flows (LOVE/UNSUB/STOP).
- Integrated Stripe for subscription billing and one-time payments with webhook-driven status updates.
- Deployed and maintained scalable backend services on Railway, using Airtable as a lightweight operational data layer.
- Participated in system design discussions, sprint planning, and continuous refactoring of shared backend modules.

Full Stack Developer | Atrule Technologies

Jun 2023 - Oct 2025

- Led end-to-end feature development across React, Next.js, Node.js, NestJS, GraphQL, TypeScript, Prisma, and Sequelize for multiple client products.
- Built authentication and authorization flows using Clerk, Passport.js, and Firebase Authentication across web applications.
- Developed responsive, production-grade UIs using PrimeReact, Formik, Tailwind CSS, and Redux Toolkit.
- Refactored legacy frontend and backend modules to improve code reusability, maintainability, and performance.

Associate MERN Stack Developer | Pukat Digital

Jan 2023 - Apr 2023

- Implemented new features and resolved bugs across the front-end and back-end of multiple client projects.
- Built REST APIs with Node.js, Express.js, and MongoDB, collaborating closely with frontend developers on integration.
- Worked within an Agile scrum team using Git for version control and code review.
- Built web scraping pipelines to extract and integrate third-party data from social media and external websites.

SELECTED PROJECTS

Mail Flow Agent — AI-Driven Document Processing Pipeline | Python, FastAPI, Azure OpenAI, Microsoft Graph API, SQL Server

- Built an end-to-end pipeline that ingests unread Microsoft 365 emails with attachments, extracts structured property data using Azure OpenAI, and matches records in SQL Server via configurable exact, fuzzy, and smart-matching strategies.
- Implemented automated attachment routing into structured asset folders with inferred document classification (BS/IS/RR/TB) and quarterly checklist updates.
- Delivered a FastAPI admin panel with CSRF protection, run dashboards, settings history, and secure secrets management via environment configuration.
- Added configurable processing rules (email filters, confidence thresholds, read-state handling) with structured run logging and DB health checks.

Dual-Market Arbitrage Bot — Kalshi + Polymarket | TypeScript, Node.js, Express.js, WebSocket, Docker, PM2

- Built a TypeScript arbitrage detection and execution engine connecting to Kalshi and Polymarket APIs, identifying cross-platform opportunities using fee- and gas-aware net-edge calculations.
- Implemented market normalization across two prediction platforms with dynamic execution intervals and structured Winston logging.
- Built both a paper-trading simulator with P&L tracking and a live hedged execution mode with built-in safety controls.
- Created a real-time WebSocket dashboard for cycle monitoring, trade history, and live status updates.

SMS-Auto — Community Weft | Next.js 14, TypeScript, Stripe API, Bird.com API, Airtable

- Built a Next.js application for SMS-based community subscriptions with Stripe checkout/webhook integration and Bird.com inbound SMS automation.
- Implemented keyword-based subscriber flows (LOVE/UNSUB/STOP) with Airtable-backed persistence and tier management.
- Automated monthly care-message delivery and post-payment welcome sequences.

Growth Genie — Full-Stack Growth Platform | Next.js 16, NestJS, FastAPI, Redis, WebSocket, Cloudinary

- Built a Next.js App Router client for AI-assisted idea validation, success scoring, dashboards, knowledge base, and file uploads via Cloudinary.
- Implemented Redis-backed real-time persona status (working/idle), broadcast to the UI via WebSocket.
- Contributed to NestJS backend APIs and FastAPI services powering execution and resume-submission workflows.

Customer Order Pickup Dashboard — WynShop (acquired by Instacart) | React PWA, Redux Toolkit, Next.js, Node.js, GraphQL, Twilio, MongoDB

- Built a dashboard enabling store managers and staff to manage customer pickup orders for a US eCommerce platform.
- Integrated real-time order notifications and barcode-based age verification via US driver's licenses.
- Implemented order tracking and Twilio-based SMS/email notifications for customers and staff, with MongoDB for scalable order data.

QualityShopMarketplace — DTC Marketplace Frontend | Next.js, Redux Toolkit, Tailwind CSS, OpenAI API, REST APIs

- Built the frontend for a direct-to-consumer marketplace focused on healthy food and drink brands, integrating .NET Core backend APIs.
- Used the OpenAI API client-side to detect and classify health-conscious products.
- Collaborated with backend and data teams to surface filtered product data sourced from 2.5M+ Shopify stores.

Contract Management System — Blitzy | Vue.js, Quasar, Pinia, Tailwind CSS, REST APIs

- Improved stability and UX of an AI-powered contract management system by debugging major UI and configuration issues.
- Re-engineered frontend components using Vue.js, Pinia, and Quasar to align with updated backend logic from .NET-based APIs.

- Contributed to performance optimization and UI consistency across a complex enterprise application.

E-Commerce Platform | Next.js, NestJS, GraphQL, Redux Toolkit, Sequelize, MySQL

- Built a full-featured e-commerce site with Next.js frontend, NestJS backend, and MySQL via Sequelize ORM.
- Implemented Redux Toolkit state management for cart, user data, and product details, with GraphQL for optimized data fetching.
- Implemented user authentication, order management, and payment processing.

Company Portfolio Website | Next.js, Node.js, Express.js, SQL Server, TypeORM, Passport.js

- Built an SEO-optimized Next.js frontend showcasing company services, team, and projects, with a Node.js/Express backend.
- Integrated TypeORM with SQL Server for dynamic content management and Passport.js for secure authentication.
- Implemented contact/inquiry forms with React Hook Form and made the site fully responsive with Tailwind CSS.

Pakistan Petrol Price App — Backend API (300K+ downloads) | LoopBack 4, Node.js, TypeScript, Puppeteer, Google Maps API

- Built a secure, scalable LoopBack 4 API serving real-time petrol price data to a mobile app with over 300,000 downloads.
- Used Puppeteer to scrape and keep petrol price data current from external sources.
- Integrated Google Maps API for nearby station discovery and fuel-efficiency calculations, with full user authentication.

Pakistani Brands App — Backend Aggregation Service | LoopBack 4, Node.js, TypeScript, Puppeteer, SQL Server, OneSignal

- Built a backend aggregating product data from 50+ Pakistani apparel websites using Puppeteer-based web scraping.
- Integrated OneSignal push notifications for sales and new product alerts, with SQL Server/Sequelize for data storage.
- Built a secure LoopBack 4 + TypeScript API for managing user interactions and product listings.

Currency Converter App — Backend API | Node.js, Express.js, MongoDB, OneSignal, Passport.js

- Built a Node.js/Express backend supporting real-time currency conversion across 20 countries via external exchange-rate APIs.
- Added daily gold price updates for major Pakistani cities and OneSignal push notifications for rate changes.
- Implemented secure user authentication with Passport.js for personalized services.

EDUCATION

Bachelor's Degree in Information Technology — BZU, Multan 2015 - 2019
